## **Monday-Sunday**

- Elevated to briefly critical fire weather conditions are expected over much of northern and northeastern California Monday and Tuesday as winds become increasing gusty from the southwest and low humidity levels persist
  - Gusty winds will persist into Wednesday along and east of the Sierra though humidity levels will be higher
- Scattered showers and thunderstorms are expected across southern California later Monday through Tuesday, with rainfall amounts mainly one-quarter inch or less
  - No widespread burn scar impacts are expected with this early week rainfall
- Very warm temperatures for many areas through Monday will be replaced by much cooler conditions for mid and late week, persisting into the weekend as well. Periods of showers are also increasingly likely at times for much of the state, particularly Thursday and Friday, though confidence in rainfall amounts remains low at this time.
  - Some high elevation snow is also possible over the Sierra late in the week, though again, the exact details are not yet clear
